Interference-free microprocessor

Application Number	01103000	Application Date	2001.02.14
Publication Number	1309351	Publication Date	2001.08.22
Priority Information	2000/2/14 JP 035898/2000;2000/5/8 JP 135010/2000		
International Classification	G06F9/48;H04L9/00		
Applicant(s) Name	K.K. Toshiba		
Address			
Inventor(s) Name	Hashimoto Mikio; Teramoto Keiichi; Saito Takeshi		
Patent Agency Code	11038	Patent Agent	wu lili
Abstract			

Under a multi-task environment, a tamper resistant microprocessor saves a context information for one program whose execution is to be interrupted, where the context information contains information indicating an execution state of that one program and the execution code encryption key of that one program. An execution of that one program can be restarted by recovering the execution state of that one program from the saved context information. The context information can be encrypted by using the public key of the microprocessor, and then decrypted by using the secret key of the microprocessor.
